

Atlas Planning Suite

Comprehensive, Easy-to-use Planning Solution

The Atlas Planning Suite provides a comprehensive supply chain planning system of record that delivers real benefits to your business:

End to End Planning

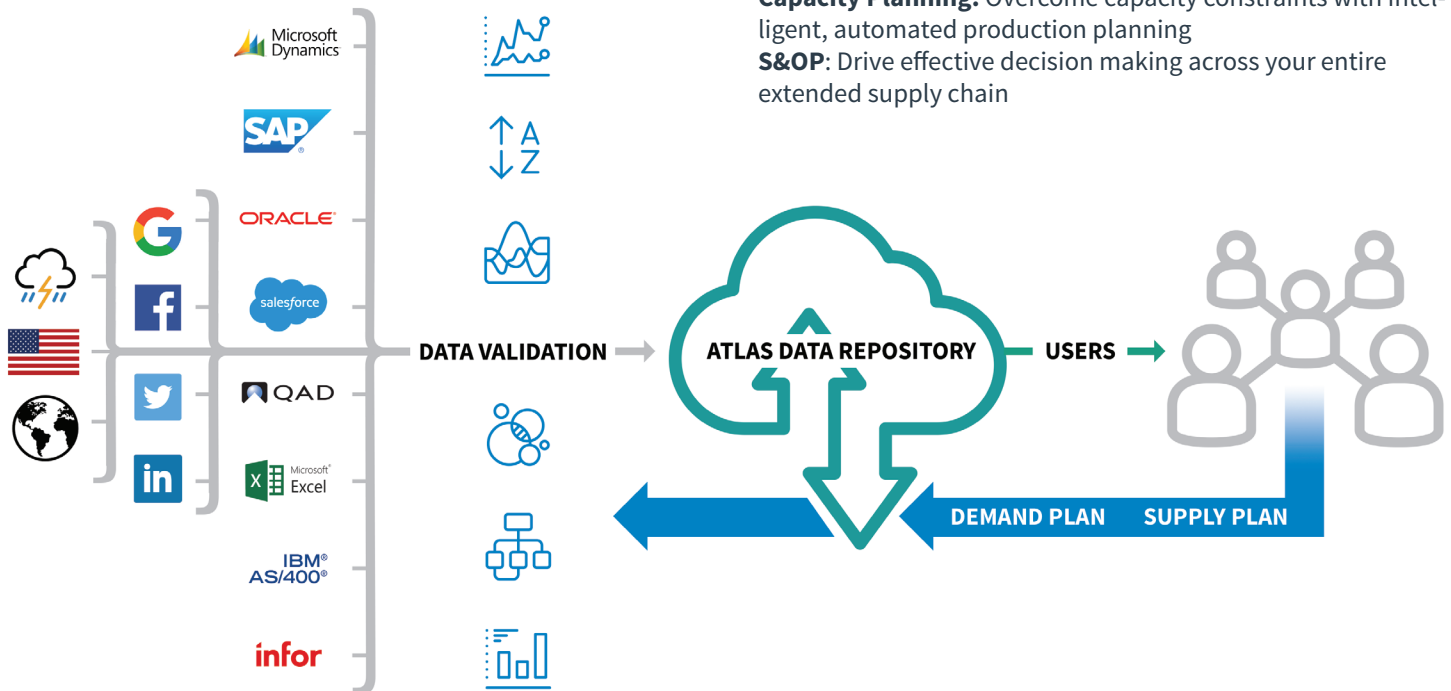

Atlas integrates data from every link in your supply chain all the way to your end customer, so you can plan for every tier of your supply chain.

- Sense shifts in consumer demand early to gain time to respond
- Enhance your process with the latest AI and machine learning techniques
- Collaborate with sales and other groups to understand customer demand early
- Collaborate with retailers on store-level replenishment and distribution
- Produce accurate VMI plans at your customers' distribution centers
- Balance inventory throughout your network to ensure optimal stock levels
- Optimize production and stock through all echelons of the production plan
- Build effective supplier relationships through collaborative

Seamless Integration with Any Data Point

Benefits by User

- Demand Planning:** Accurately predict and shape demand to optimize sales and ROI
- Supply Planning:** Efficiently meet customer demand by delivering the optimal inventory to the right place
- Capacity Planning:** Overcome capacity constraints with intelligent, automated production planning
- S&OP:** Drive effective decision making across your entire extended supply chain

Atlas Planning collects and validates data from a broad variety of sources, giving planners the data they need while keeping plans in sync.

- Seamlessly combine data from multiple systems to produce a single database of record
- Automate data validation powered by machine learning
- Fully integrate data across all modules to simplify analysis and reporting
- Simplify user experience with no manual effort to integrate data

PROCESS SUPPORTED

DEMAND MANAGEMENT
